

Sirs,

Reference the proposed 60 meter amateur band: I would prefer the band be limited to 200 watt output power with designated subbands to include CW(50%), digital modes(50%)like the current 30 meter band. If phone modes (SSB/AM) were to be added, I would hope you can keep them to no more than 40% of the band. Furthermore, I would like to see the band open to all General class and above licences.

I do not see the need for an additional high power band for domestic use. Keeping the power limit will ensure that all Amateurs have the ability to use the spectrum on an "equal footing" basis, and would help limit strong interference to other parts of the world on these frequencies.

Respectfully,

Fredrick A. West
